

Arkal Plastic Disc Filters

Disc-Kleen technology is the most efficient filtration available. As water travels through the filter, grooves in the disc form a network that traps both organic and inorganic contaminants. Disk filters are designed to filter water throughout the entire depth of every groove whereas screen filters trap only material on the surface.

SIZE	MODEL	ITEM #	MAX GPM	PRICE	Replacement Ring Set w/Spine

QUALITY STAINLESS STEEL SCREENS!

Plastic Spin Clean® have a unique self-cleaning spinning action that cleans the stainless steel screens even under the most severe conditions. These filters work by forcing dirty water through a directional nozzle plate onto the inside of the stainless steel screen. This spinning action rotates debris down the screen wall to the large debris holding basin. Debris is flushed out via a ball valve or cap. The spinning action keeps more of the screen area clean, minimizing pressure losses due to excessive dirt build-up. Maximum 150 PSI pressure rating. **This 3/4" Filter is used in our Garden Kits!**
