*“Ro-Trak” is a self-steering device that makes adjustment to keep the mulch layer straight. It works especially well on hillsides and contours. It keeps the covering discs and press wheels accurately positioned on each side of the bed because it stops the rear of the mulch layer from fish tailing.*

### FEATURES

- ~ Beds are shaped 6” to 8” high.
- ~ Includes rubber dirt shields, adjustable row markers, independent press wheels & cover arms, and spring loaded side curved chisel teeth.

**REQUIREMENTS: 70 HP Tractor or 40 HP Tractor with 4-Wheel Drive**
