

SHORT CYCLE TRELLISING

Mini Hook, 500mh

Trellising for short cycle crops is a time-consuming task. Workers need to climb a ladder to adjust the plant as it grows. Often, the stems are tangled and disorganized.

Mini Hook offers an easy, efficient and cost-effective way to trellis tomato plants in low and medium height greenhouses.

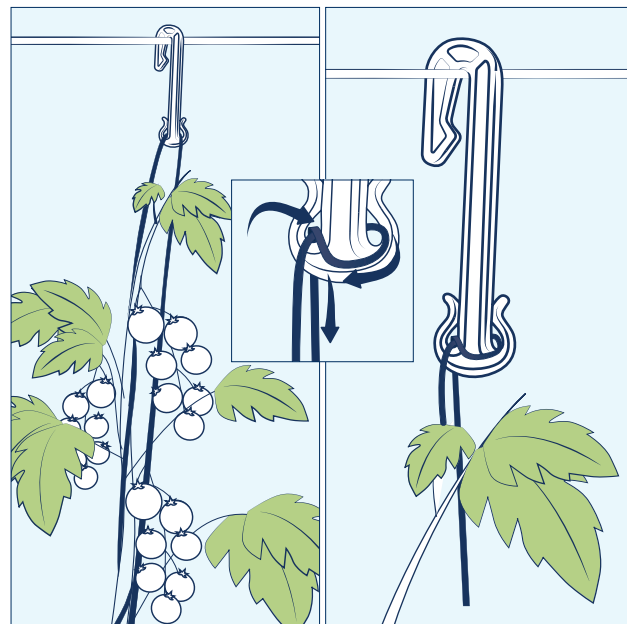

Advantages

Efficient labor

- Great value for money
- Facilitates organized rows of plants and makes fruit picking easier
- Releasing the twine and lowering the plant is a fast and easy process
- Lowering is faster compared to opening and closing a knot
- Easy to remove the stems at the end of the season
- Suitable for up to 4 mm trellising wire
- UV resistant
- Multi-seasonal use
- For tomatoes – one side of the twine is used to adjust the length as the stem grows

Crop protection

- Stems are kept organized and are easy to maintain
- Mini Hook with twine is hung on the trellising wire to support the plant
- Doesn't slide along the wire

Instructions for use

- Attach the Mini Hook to the trellising wire
- Attach the twine to the Mini Hook
- Wind the twine (used for lowering) around the Mini Hook and insert it inside the hook
- Take the main twine (for attachment to the plant) and insert it to the hook, above the other twine
- Connect one side to the plant; use the other side for lowering (leave about 1 meter for this purpose)
